Restriction/Election

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

Group I: Claims 8-20, drawn to an ink flow path of a print head for an ink jet printer , classified in class 347, subclass 65.

Group II: Claims 1-7 and 21-22, drawn to a valve for an ink cartridge, classified in Class 347, subclass 87.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P. § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination of Group I does not require the subcombination of Group II. For example, invention I has separate utility such as an ink cartridge comprising a valve member while the Invention II relates to a valve. The structure of the valve member of the Invention I is different from the structure of the valve of the Invention II. Thus, the relationship between the invention I and the Invention II is distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
